# What is the Stock Market?

The stock market is a marketplace where investors buy and sell shares (stocks) of publicly traded companies. It serves as a platform for companies to raise capital and for investors to potentially profit from price movements and dividends.

- Shares (Stocks) – Represent ownership in a company. Investors buy shares to participate in a company's growth.
- Price Fluctuations – Stock prices change based on supply, demand, company performance, and economic factors.

# How the Bot Works

## How It Works

- Market Data Analysis – The bot collects real-time price data, technical indicators, and historical trends to identify potential trade opportunities.
- Signal Generation – Based on a set of trading strategies (e.g., moving averages, RSI, MACD), the bot determines when to buy or sell.
- Order Execution – The bot places buy or sell orders automatically based on predefined conditions and risk parameters.
- Risk Management – It applies stop-loss, take-profit, and position-sizing rules to minimize risks.
- Trade Monitoring & Adjustment – The bot continuously tracks open trades and market changes, adjusting strategies as needed.

# Factors Affecting Stock Price

## Economic Indicators

Strong earnings drive stock prices up, while poor results lead to declines.

## News, events

Strong economic growth boosts markets, while recessions cause declines.

## Company Performance

Higher dividends or stock buybacks often boost investor confidence and stock prices.
